## Novoform: your access partner for industrial buildings

Novoform has specialised in many forms of access and exit door systems for industrial buildings and homes for more than thirty years. An extensive choice of designs, finishes, controls and installation options means that you always benefit from a customised solution. We take responsibility for the whole process from initial specification advice to development, production, assembly and even assistance with construction coordination if required. Obviously, we also monitor aspects such as the associated standards and legislation very closely; — something that saves you significant work and extra effort.

In addition to industrial doors, draught-excluding and fire rated doors Novoform also offers products for the goods delivery and despatch areas in industrial and commercial buildings. Novoform is part of the Sanwa Shutter Corporation, a leading producer of doors, garage doors and other products for equipping buildings worldwide, so choosing a Novoform product not only guarantees you the most modern and up-to-date technology available, you also benefit from maximum quality, reliability, comfort and design at minimum cost!

## Safe doors

All automatic doors must comply with European Directive EN 13241. Novoferm develops and produces its new products strictly in line with these standards. As a result, you are guaranteed safe operation during daily use, assembly and maintenance.

[www.novoferm.co.uk](http://www.novoferm.co.uk)

# Why choose a Novoferm rapid roll door?

## Different situations demand different solutions

Working efficiently means working economically. Novoferm rapid roll doors help you improve your logistic performance. Novoferm offers a customized solution for almost every situation. Our in-house research and development departments respond alertly to changes in the requirements that rapid roll doors have to satisfy.

Industrial buildings already have to comply with increasingly stringent energy saving requirements and this trend is forecast to continue. Research performed by the Technical University of Munich has shown that rapid roll doors have a significant effect on the amount of energy consumed in industrial buildings. The study shows that the interior temperature of a building or room plummets when the door is left open (depending on the temperature differential and type of building). Consequently, the shorter the period of time that a door remains open, the lower the drop in interior temperature. Draughts are also significantly reduced, which helps maintain a more comfortable environment in the building and reduces sickness absenteeism.

### Working efficiently means working economically

When a door is used infrequently, insulation is of great importance. However, when a door is used frequently, the speed at which it opens and closes, and the height to which it opens, are much more significant. The latest generation of Novoferm control units features an adjustable half-height stop setting as standard. In combination with the "Auto-close" function, this feature allows you to achieve considerable energy savings.

Regardless of the type of door, the energy loss through an open door will always far exceed the degree of energy loss due to heat transfer and air leakage through a closed door. Research at the Technical University of Munich has shown that installing fast-action (roller) doors and avoiding long periods spent in the open position can reduce the additional energy requirements by as much as **30%**! Interlocking two doors to create an air lock results in even greater savings and can improve the interior climate by up to **90%**.

### Efficient use of energy, also during production

Novoferm signed the group's 'Green Solutions' Charter In 2009. This consists of a package of concrete measures designed to reduce CO<sup>2</sup>-emissions during production, delivery, assembly and maintenance of industrial doors.

#### 100 % recyclable materials

This is a goal that we consistently pursue. As a result, we select our raw materials and resources with great care, adding our own sustainable in-house development procedures into the equation. For instance, our control units are completely lead-free and comply with RoHS requirements. So we have already assumed a leading role in this area.

### Single-source manufacturer and supplier

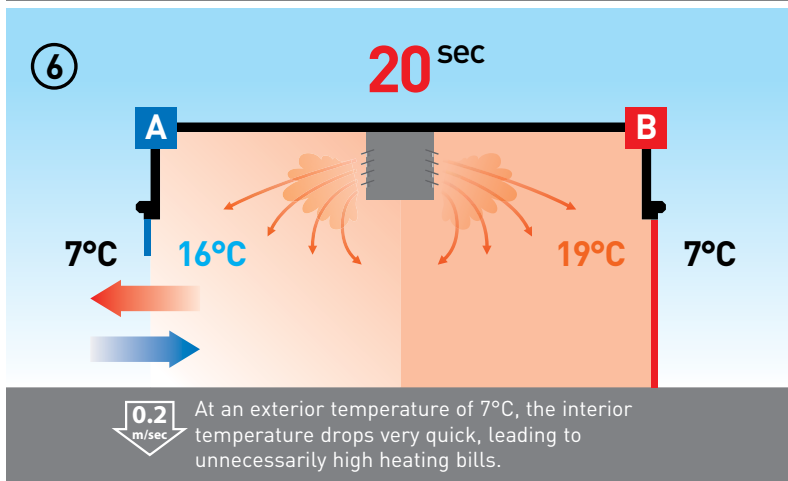

Novoferm not only supplies draught excluding products, we also offer a full range of industrial doors, multifunctional passdoors, fire doors and dock equipment. There is a highquality Novoferm product for every opening in a modern industrial building. Doing business with a single partner has the following advantages:

- Single point of contact for all products, installation, maintenance and after sales
- Products are designed for optimum compatibility with each other
- Products are automatically delivered in the correct sequence
- Installers / fitters who are familiar with all of the productst

# Energy loss

The illustrations below show how air flow through a conventional outside door (A) results in energy loss. When a high tech rapid roll door from Novoferm (B) is used, the door has already closed again before the air flow reaches the opening.

This maintains the interior temperature at a constant value, saves energy, guarantees pleasant working conditions and reduces sickness absenteeism as an added bonus.

## Customer service

When you deal with Novoferm, projects do not simply stop after product installation. Service and maintenance are vital for ensuring continuous product availability, quality and durability. Novoferm offers effective 24-hour service, back-up and a selection of maintenance packages to guarantee your business continuity.

# Applications

The extensive range of draught-excluding solutions from Novoferm is used in just about all market sectors. The exact type of door depends on the specific application and the conditions in which it is to operate. Our standard range offers solutions for most situations. Based on your input, we can also engineer and supply custom-made solutions to satisfy any special requirements you may have.

## Light and heavy industry

The light and heavy industry sectors require a wide variety of draught-excluding solutions.

Novoferm's extensive range of doors includes suitable solutions for practically any situation in these sectors. These products are easy to assemble, operate reliably for extended periods and require little maintenance. So our products guarantee you operating reliability, business continuity and safety.

## Food

Novoferm is a recognised name in the food industry. In Europe we have a long history of supplying our products to major food producers and processors.

We also have extensive experience with cold store manufacturers. We know from experience that this sector involves more than simply using materials such as stainless steel and compliance with strict hygiene requirements, there is also strong demand for custom-made solutions. These usually focus on cost efficiency and ensuring production process continuity.

## Retail

In modern supermarkets, the shelves are always well stocked with an extensive range of products. Intensive traffic between the storeroom and the retail shop space is required to keep the shelves filled.

In view of this level of traffic, a rapid roll door is often chosen to separate the retail space from the storeroom. It operates at high speed, opens and closes automatically, is safe for users, hardly takes up any space and is a low-noise product. Novoferm designs and manufactures custom-made doors for various retailers, and currently supplies its products to most leading chain stores in Europe.

### Automotive

A typical car factory produces approximately one thousand cars a day on average. This level of production requires an immense flow of goods and timely delivery is of vital importance.

As a result, the doors used in this logistics flow also have to satisfy demanding requirements. Novoferm offers products that operate dependably under these conditions, day-in and day-out. Novoferm also supports its products with 24/7 service to minimise downtime in the unlikely event of a breakdown.

### Pharmaceutical and chemical industry

The pharmaceutical and chemical industries require suppliers to meet challenging standards in the areas of hygiene, sealing, operating reliability, fitting and providing efficient aftersales service.

Not only does Novoferm offer custom-made solutions for these sectors, it also invests significant amounts of time and money in training production staff and technicians. Our technicians and the companies assembling our products for us are SCC certified. So they comply with all of the requirements that apply when working in a strictly regulated operating environment.

### Logistics

When products are ready, need to be transported to the end customer as quickly and efficiently as possible. Consequently, many European companies subcontract warehousing, transshipment and delivery to large logistics distribution centres.

The doors involved in these logistic flows often open and close many times a day. Using a top-class product alone is not enough however! Even the best product fails occasionally when used intensively. As preventive maintenance minimises failures of this type, Novoferm offers a range of maintenance and service contracts.

## NovoSpeed Retail

- developed for Retail
- max. 5.85 m<sup>2</sup>
- class 1 wind resistance
- opening speed: 2 m/s with frequency control
- option for photo print on door curtain

12

## NovoSpeed Flex 2.0

- developed for frequently used doorways
- max. 20 m<sup>2</sup>
- class 0 wind resistance
- opening speed: 2 m/s with frequency control

14

**New!**

## SpeedRoller Prime

- developed for universal use and average wind pressure
- max. 12.25 m<sup>2</sup>
- class 0 wind resistance or at least 5 Bft
- opening speed: 1 m/s;
- opening speed: 1.5 m/s with frequency control (option)

15

**New!**

## SpeedRoller Strong

- developed for large doorways and average wind pressure
- max. 25 m<sup>2</sup>
- class 0 wind resistance or at least 5 Bft
- opening speed: 1 m/s
- opening speed: 1.5 m/s with frequency control (option)

16

## NovoSpeed Heavy | Indoor

- developed for large, frequently used doorways
- max. 36 m<sup>2</sup>
- class 0 wind resistance
- opening speed: 1 m/s
- opening speed: 1.5 m/s with frequency control (option)

17

## NovoSpeed Heavy

- developed for large, frequently used doorways
- max. 36 m<sup>2</sup>
- class 0 wind resistance
- opening speed: 1 m/s
- opening speed: 1.5 m/s with frequency control (option)

18

## NovoSpeed Polara

- developed for extremely cold conditions
- max. 17.5 m<sup>2</sup>
- class 0 wind resistance
- opening speed: 1 m/s

19

## Strip curtains / Swing doors

- developed as an economical alternative

# Exterior doors

21

## NovoSpeed Thermo

- developed for exterior façades
- max. 25 m<sup>2</sup>
- class 3 wind resistance
- opening speed: 1.1 m/s with frequency control

22

## NovoSpeed Alu | R

- developed for exterior façades
- max. 25 m<sup>2</sup>
- class 2 wind resistance
- opening speed: 1 m/s with frequency control

23

## NovoSpeed Heavy | Outdoor

- developed for exterior façades
- max. 36 m<sup>2</sup>
- class 2 wind resistance
- opening speed: 1 m/s
- opening speed: 1.5 m/s with frequency control (option)

## Specially fabricated frames

A specially fabricated frame is generally required to fit a rapid roll door behind an (existing) exterior industrial door. A custom-made frame can be supplied after specification by our technical specialist. This service allows you to single-source your complete door system.

# Inside applications – Clever interior door solutions

# NovoSpeed RETAIL

These days, supermarkets also have to look attractive. The products on display need to be presented accessibly and appetisingly. The NovoSpeed **Retail** door puts the finishing touches to a successful in-store presentation. This rapid roll interior door with its opening speed of 2 m/s is not just one of the fastest of its kind, it also opens and closes in near silence.

#### Specifications

NovoSpeed	Retail
max. width (W)	2,250 mm
max. height (H)	2,600 mm
opening speed	2 m/s
closing speed	0.5 m/s
door curtain weight	680 gr/m <sup>2</sup>
door curtain thickness	0.7 mm

#### Product Benefits

- Class 1 windresistance
- compact design of side guides and roller cover
- self-repairing after impact, in one direction
- a safety light curtain is standard
- supplied in the following colours as standard:

**5005 9004 9003 7038 7024 3020 2009 1003**

## The best solution for your store!

The standard tubular motor allows elegant styling without taking up excessive space in the store. And if you truly want to dot your i's and cross your t's in terms of presentation, you can also print your logo or a photographic image on the PVC door curtain.

Safety is obviously the most important consideration in areas with a high customer density such as supermarkets. The NovoSpeed Retail is equipped as standard with a FlexEdge bottom beam and can be supplied with either a mechanical or an automatic emergency opening system for use in the event of a power failure.

#### Options

- Flex-Edge instead of aluminium lower beam
- counterweight instead of spring for balancing
- industrial integrated drive
- multiple photocells in the side guides
- mechanical release in the event of powerfailure
- door curtain featuring a print of your choice

Standard control unit:

T100R FU

# NovoSpeed FLEX 2.0 | HARD EDGE

The NovoSpeed Flex **HardEdge** an electrically operated rapid roll door for the retail sector, general industry and commercial and industrial buildings. The Flex is neatly finished and combines high speed with low noise.

### Specifications

NovoSpeed	Flex HardEdge
max. surface area (W x H)	20 m <sup>2</sup>
max. width (W)	4,000 mm
max. height (H)	5,000 mm
opening speed	2 m/s
closing speed	0.5 m/s
door curtain weight	1,400 gr/m <sup>2</sup>
door curtain thickness	1.2 mm

### Product Benefits

- Class 0 windresistance
- self-supporting construction
- 100% self-resetting in both directionstion
- a safety light curtain is standard
- supplied in the following colours as standard:

5005

9004

9003

7038

3020

2009

1023

## Attractive, fast and silent

### Universal solution

The NovoSpeed Flex is an interior door for universal use in industry. The door is fast and strikingly silent in operation. An industrial drive unit integrated in the roller keeps the side space requirement to a minimum. The advanced control panel is equipped with frequency control as standard, offering many functions and connection possibilities.

#### Presence detection

An active light curtain is supplied to a maximum height of 2,500 mm. When the door is open, the safety light curtain detects both moving and stationary objects in the opening and prevents the door from closing.

This new generation of NovoSpeed Flex is equipped with two extension springs for door curtain balancing, resulting in a considerably extended service interval.

**Options:** see page 13 for details of all the options offered for the NovoSpeed Flex

Standard control unit:

T100R FU

Silent integrated drive

Mechanical emergency release

# NovoSpeed

## FLEX 2.0 | FLEX EDGE

The NovoSpeed Flex **FlexEdge** is an electrically operated rapid roll door for interior applications in the retail sector, general industry and commercial buildings. The flexible bottom beam can not damage your products.

### Specifications

NovoSpeed	Flex FlexEdge
max. surface area (W x H)	17.5 m <sup>2</sup>
max. width (W)	3,500 mm
max. height (H)	5,000 mm
opening speed	2 m/s
closing speed	0.5 m/s
door curtain weight	1,400 gr/m <sup>2</sup>
door curtain thickness	1.2 mm

### Product Benefits

- Class 0 windresistance
- self-supporting construction
- 100% self-resetting in both directionstion
- a safety light curtain is standard
- supplied in the following colours as standard:

5005

9004

9003

7038

3020

2009

1023

## If your goods are fragile

No damage when collisions occur

100% self-repairing in both directions

## Soft and flexible bottom beam

When closing a rapid roll door in relatively low openings, contact may occur between the bottom beam and the goods being transported. A hard bottom beam might cause damage. The 'FlexEdge' is flexible and soft, thereby increasing safety. Persons or goods that 'accidentally' come into contact with the 'FlexEdge' will suffer little or no damage.

The door opening is monitored in the same way as the 'HardEdge' door.

The following options are available for the NovoSpeed Flex **HardEdge** / **FlexEdge**:

**Option 1:** mechanical emergency release

**Option 2:** protective cover in galvanised steel / stainless steel painted in a choice of RAL colours

**Option 3:** guide columns in costumer-specified RAL colour (powder coating)

Standard control unit:

T100R FU

See the Technical Data on page 28 for more information, or download the Product Data Sheet from [www.novoferm.com](http://www.novoferm.com)

# SpeedRoller PRIME

**NEW!**

The SpeedRoller **Prime** is an electrically operated rapid roll door that combines good quality with excellent value for money.

## Specifications

SpeedRoller	Prime
max. surface area (W x H)	12.25 m <sup>2</sup>
max. width (W)	3,500 mm
max. height (H)	3,500 mm
opening speed	1 m/s
opening speed with frequency control	1.5 m/s
closing speed	1 m/s
closing speed with frequency control	0.5 m/s
door curtain weight	680 gr/m <sup>2</sup>
door curtain thickness	0.7 mm

## Product Benefits

- Class 0 windresistance or at least 5 Beaufort
- light curtain in the door opening
- suitable for small interior openings and normal wind loads
- supplied in the following colours as standard:

**5005 9004 9003 7038 7024 3020 2009 1003**

## Appearance and performance in perfect harmony

### The fast and quiet solution

The SpeedRoller Prime is a cost-effective solution for small openings up to 12.25 m<sup>2</sup> and normal use. Ideal for openings used by pedestrians and materials handling equipment. This door is suitable for a wide range of applications, due in part to its very competitive price.

Specific features:

- robust steel guide side columns fitted with brush seals guide the door curtain
- aluminium bottom beam with a rubber floor profile
- steel U-shaped side guide with brush seals
- light curtain as standard

### Options

- available with a FlexEdge bottom beam
- all construction parts in stainless steel
- cover over roller in steel, stainless steel or plastic
- door curtain featuring a print of your choice

Available control units:

T100R

T100R FU

Completely new developed top hood (optional)

FlexEdge bottom beam

# SpeedRoller STRONG

**NEW!**

The SpeedRoller **Strong** is the innovative standard rapid roll door for intensively used openings. Proven technology guarantees many years of trouble-free operation. Designed for use in general industry and commercial buildings.

### Specifications

SpeedRoller	Strong
max. surface area (W x H)	25 m <sup>2</sup>
max. width (W)	5,000 mm
max. height (H)	5,000 mm
opening speed	1 m/s
opening speed with frequency control	1.5 m/s
closing speed	1 m/s
closing speed with frequency control	0.5 m/s
door curtain weight	680 gr/m <sup>2</sup>
door curtain thickness	0.7 mm

### Product Benefits

- Class 0 windresistance or at least 5 Beaufort
- light curtain in the door opening
- suitable for smaller interior openings and normal wind load
- supplied in the following colours as standard:

**5005 9004 9003 7038 7024 3020 2009 1003**

## The most reliable basis for intensive use

### Best basis for intensive use

The SpeedRoller Strong is the basic high speed roller door model for intensive use. The door curtain is made of horizontal sections of extremely durable polyester-reinforced PVC. All aspects of the door are robustly designed and well-engineered for every day energy saving, draught exclusion and climate control.

Specific features:

- robust steel guide side columns fitted with brush seals guide the door curtain
- the sections are connected to each other by aluminium stiffener/hinge profiles
- standard vision section
- aluminium bottom beam with rubber floor seal
- light curtain as standard

### Options

- available with a FlexEdge bottom beam
- all construction parts in stainless steel
- cover over roller in steel, stainless steel or plastic
- plastic cover over drive

Available control units:

T100R

T100R FU

T100R FU 3 kW

Reinforcement brackets for higher windresistance

Integrated curtain stiffener/hinge profiles

See the Technical Data on page 28 for more information, or download the Product Data Sheet from [www.novoferm.com](http://www.novoferm.com)

# NovoSpeed HEAVY | Indoor

The **Heavy Indoor** is a high-speed, electrically operated rapid roll door, specifically designed for interior openings in industrial and commercial buildings.

### Specifications

NovoSpeed	Heavy Indoor
max. surface area (W x H)	36 m <sup>2</sup>
max. width (W)	6,000 mm
max. height (H)	6,000 mm
opening speed	1 m/s
opening speed with frequency control	1,5 m/s
closing speed	1 m/s
closing speed with frequency control	0.5 m/s
door curtain weight	1,400 gr/m <sup>2</sup>
door curtain thickness	1.2 / 3 mm

### Product Benefits

- Class 0 windresistance
- safety photocell in the door opening
- completely transparent 'Full Vision' door curtain optional
- supplied in the following colours as standard:

5005

9004

9003

7038

3020

2009

1023

parent

## A tower of strength

### Workhorse for large openings

The NovoSpeed Heavy Indoor has been specially developed for large interior openings up to 36 m<sup>2</sup>. All structural components and the curtain are robustly designed and engineered. Overpressure and underpressure can exert considerable forces on the door curtain. With its 1.2 mm thick door curtain and strong aluminium stiffener/hinge profiles, the Heavy Outdoor is capable of withstanding wind loads of up to 5 Beaufort (28 - 38 km/h). Specific features:

- extra strong, fabricated steel side columns with brushes to seal and guide the door curtain
- a bottom beam with a self-testing bottom safety edge and cast aluminium end pieces of as standard
- the aluminium lower beam is available with a 'BreakAway' crash-protection system, which prevents damage in a collision and allows the door curtain to be repositioned in the guides without having to use special tools
- safety light curtains in the guide

Available control units:

T100R

T100R FU

T100R FU 3 kW

# NovoSpeed HEAVY

An exterior door should be left open for the shortest possible period of time. A traditional exterior door opens and closes relatively slowly, leading to considerable energy loss. However, energy loss can be minimised by combining a 'slow' exterior door with a rapid roll door.

## Specifications

NovoSpeed	Heavy
max. surface area (W x H)	36 m <sup>2</sup>
max. width (W)	6,000 mm
max. height (H)	6,000 mm
opening speed	1 m/s
opening speed with frequency control	1.5 m/s
closing speed	1 m/s
closing speed with frequency control	0.5 m/s
door curtain weight	3,000 gr/m <sup>2</sup>
door curtain thickness	3 mm

## Product Benefits

- Class 0 windresistance
- heavy duty product for high wind loads
- supplied in the following colours as standard:

5010

7023

2002

1021

## Robust and energy-efficient

### Proven reliability

Wide side columns in combination with a sophisticated tensioning system make a major contribution to the excellent stability offered by the NovoSpeed Heavy. The robust aluminium bottom beam, heavy-duty aluminium stiffener/hinge profiles and 3 mm thick door curtain complete this door's impressive specifications.

Available control units:

T100R

T100R FU

T100R FU 3 kW

See the Technical Data on page 28 for more information, or download the Product Data Sheet from [www.novoferm.com](http://www.novoferm.com)

# NovoSpeed POLARA

The **Polara** door provides an effective seal in freezer cell openings. All components are heated. The door opens automatically every 15 minutes to prevent icing.

## Specifications

NovoSpeed	Polara
max. surface area (W x H)	17.5 m <sup>2</sup>
max. width (W)	3,500 mm
max. height (H)	5,000 mm
opening speed	1 m/s
closing speed	1 m/s
door curtain weight	680 gr/m <sup>2</sup>
door curtain thickness	0.7 mm

## Product Benefits

- Class 0 windresistance
- safety photocell in the door opening
- operates down to -30 ° C
- dual radar for detecting ice
- bottom beam with multilene end pieces
- supplied in the following colours as standard:

5005

9004

9003

7038

7024

3020

2009

1003

## Resistant to extreme cold

### When hygiene is vital at low temperatures

The Polara is suitable for use in the food industry where stringent hygiene and safety requirements apply when producing and processing fresh foods. Specific features:

- heated side guides
- heated control unit
- heated photocells
- rubber seals instead of brush seals
- IP65 drive and control unit

Standard control unit:

heated control unit

# Additional applications

## Swing doors

### Old-fashioned reliability

A swing door is a manually operated interior door for industrial use. This door system is available in a range of sizes up to 9 m<sup>2</sup>. It owes its continuing popularity today to the following features:

- flexible door curtain in black, grey, transparent or combinations thereof
- simple construction, tried-and-tested design
- mechanical, spring-operated closing mechanism
- no drive unit or controls required
- always opens, also in emergency situations
- easy to maintain and simple to clean
- fast and simple assembly

## Easy to fit and inexpensive

### EasyClip

Are you looking for an easy-to-install draught-exclusion system for an infrequently used opening? A strip curtain may be the perfect solution.

The ideal strip width and degree of overlap can be selected based on the size of the opening and the type of materials handling equipment. Even though this type of draught exclusion system has been used for decades, its unique benefits still make it a popular choice today:

- flexible strips with good transparency
- effective noise reduction to 30 dB
- simple strip hanging system
- fast and simple assembly
- strips are easy to replace
- orange end strips (option)
- also available for freezer cell applications down to -30°C (optional)

# Minimise unnecessary energy loss

An exterior door should be left open for the shortest possible period of time. A traditional exterior door opens and closes relatively slowly, leading to considerable energy loss. However, energy loss can be minimised by combining a 'slow' exterior door with a rapid roll door.

The traditional sectional door is opened in the morning and closed at night. The rapid roll door seals the opening during the working day. The high speeds at which it opens and closes minimise the air flows that cause energy loss. The NovoSpeed range of exterior doors has obviously been designed to withstand the extreme conditions in which these doors operate.

## An investment that pays for itself!

Traditionally, two doors are often mounted in frequently used exterior openings; an insulated door for use at night and a rapid roll door that is used during the day. The new NovoSpeed Thermo combines the best of both worlds in a single product. An investment that pays for itself in next to no time!

# NovoSpeed THERMO

Novoferm sets itself ambitious targets in the areas of insulation, noise and pricing. Our research & development department has succeeded in developing a very fast sectional door that also offers excellent insulation performance: The NovoSpeed **Thermo**. Specially designed rollers keep noise to a minimum. This patented system also contributes to the sleek design of the NovoSpeed Thermo. The Directly driven ALU torsion tube and guidance based on a continuous chain/belt system is virtually maintenance free.

## Specifications

NovoSpeed	Thermo
max. surface area (W x H)	25 m <sup>2</sup>
max. width (W)	5,000 mm
max. height (H)	5,000 mm
opening speed	1,1 m/s
closing speed	0,5 m/s
panel thickness	40 mm
finish	galvanized steel

## Product Benefits

- Class 3 / 4 windresistance
- high insulation value  $U = 1,77 \text{ W} / \text{m}^2\text{K}$  when the door is fully closed (up to 5 x 5 m)
- high opening speed
- low noise due to vibration-free operation

## The fast, space-saving spiral door

### Fast all-in-one exterior door

The NovoSpeed Thermo is a contemporary innovation that hardly takes up any space thanks to the innovative spiral wind-up system. The door is not folded but rolled up as it were, in a way that prevents the laths from making contact with each other. This prevents door wear. A NovoSpeed Thermo is an ideal solution in areas where the structural ceiling arrangement does not offer enough space for a sectional overhead door. Also available as S600 version, with horizontal rails instead of a spiral.

#### Energy-conscious

You can easily reduce energy costs by opening and closing exterior doors at high speed. The NovoSpeed Thermo opens at a speed between 1.1 m/s.

#### Panel surface finishes and colours

Available in a micro line profiled finish. The door is offered in RAL 9002 as standard, but can optionally be painted in any (approximation of a) RAL colour.

Standard control unit:

TS 971

New development by Novoferm!

Spiral wind-up system

Compact hinge design

# NovoSpeed ALU R

The NovoSpeed **Alu R** is a high-speed exterior door that offers good insulation.

## Specifications

NovoSpeed	Alu R
max. surface area (W x H)	25 m <sup>2</sup>
max. width (W)	5,000 mm
max. height (H)	5,000 mm
opening speed	1 m/s
closing speed	0.5 m/s
slat height (visible)	80 mm
slat thickness	20 mm
slat wall thickness	0.66 mm
slat material	anodised aluminium E6/EV1

## Product Benefits

- Class 2 wind resistance (EN 12424) up to a door size of 5 x 5 m
- frequency control included as standard
- compact size for easy installation
- U-shaped side guides
- supplied in the following colours as standard:

7016

9007

9006

9002

9010

## Cost-effective aluminium roller shutter

### Universal roller shutter door

When speed is not a decisive factor, the NovoSpeed Alu R is an ideal solution.

Besides offering an attractive appearance, this door's opening speed of 1 m/s makes it suitable for universal use in interior and exterior openings. As door panel balancing is not required, the NovoSpeed Alu R is compactly dimensioned with smaller side guides and a less powerful drive. This simplified design approach significantly reduces the cost of the door without affecting reliability. Specific features:

- opening speed of 1 metre per second
- one or multiple viewing slats are optionally available

#### Colours

The door is offered in a standard range of RAL colours and can optionally be painted in any (approximation) RAL colour.

Standard control unit:

TS 971

# NovoSpeed HEAVY | Outdoor

The NovoSpeed **Heavy Outdoor** is a rapid rolling door with electric drive. Applications are in industry and public utilities with exterior openings.

### Specifications

NovoSpeed	Heavy Outdoor
max. surface area (W x H)	36 m <sup>2</sup>
max. width (W)	6,000 mm
max. height (H)	6,000 mm
opening speed	1 m/s
opening speed with frequency control	1.5 m/s
closing speed with frequency control	0.5 m/s
closing speed	1 m/s
door curtain weight	3,000 gr/m <sup>2</sup>
door curtain thickness	3 mm

### Product Benefits

- Class 2 windresistance
- aluminium reinforcing profile with guide wheels at the ends
- heavy duty product for outdoor use and high wind loads
- supplied in the following colours as standard:

5010

7023

2002

1021

## For large, heavily used corridors

### The fast and reliable exterior door

When fitted behind a sectional door or roller shutter, the NovoSpeed Heavy Outdoor creates a more pleasant working environment and saves energy.

The traditional sectional door is opened in the morning and closed at night. The rapid roll door seals the opening during the working day. The high speeds at which it opens and closes minimise the air flows that cause energy loss. The NovoSpeed range of exterior doors has obviously been designed to withstand the extreme conditions in which these doors operate.

Available control units:

T100R

T100R FU 3 kW

Larger wind resistance with guide wheels!

# Accessories

**Push-button**  
mushroom head  
(face-fit)

**Safety photocell**  
with Housing  
with reflector

**Ixio S**  
infrared for interior use to H = 3,5 m

**Push-button set**  
up-stop-down  
(face-fit)

**Pull switch**

**Ixio D**  
infrared and movement sensor for  
interior use to H = 3,5 m

**Push-button set**  
up-stop-down  
key-operated switch  
(face-fit)

**Key-operated**  
switch

**Radar detector**  
movement sensor for  
interior and exterior  
use to H = 6 m

**Hand transmitter**  
2-channel or  
4-channel

**Adjustable**  
photocell bracket  
galvanized steel

**Condor**  
infrared and  
movement sensor  
for interior and  
exterior use to  
H = 6 m

**ClearWave**  
switches without  
touching

**Support bracket**  
for radar or traffic  
lights

**Induction loop**  
detector  
in separate housing

**Light curtain**  
presence detection  
in the door opening  
to a maximum  
height of 2,500 mm

**Console**  
protects the guides  
in the event of a  
collision

**Traffic light**  
red

**Receiver**  
for remote control  
(also available in  
housing)

**Protective Bollards**  
galvanized or powder-  
coated, bolted or cast  
in concrete

**Traffic light**  
red/green

# Additional Controls

## Push-button

Push-buttons are used predominantly for pedestrian traffic. In situations where the hands are not always free, mushroomhead push-buttons offer a solution.

## Pull switch

The pull switch is used mainly for forklift truck traffic so the driver can operate the door without getting out of the vehicle.

## Radar detector

Radar devices only detect moving objects. The radar detector has a conical detection area and is direction-sensitive. The size, direction and sensitivity of the radar detection field are adjustable.

## Condor

The Condor combines two functions in one appliance. Radar for the detection of moving objects (door command) and active infrared for the detection of stationary objects (safety).

## Induction loop

An induction loop creates a magnetic field. When metal objects enter the field, they are detected. Consequently, the induction loop detector is suitable for forklift truck traffic as a door control or extra safety device to prevent the door from closing.

## Remote control

Radio remote control operation (transmitter and receiver) allows selective operation. Only vehicles or personnel with a transmitter can open or shut the door. The transmitters may have one or more channels.

## Photocell

Photocells are mainly used to monitor the door opening. The door will not close when the photocell beam is interrupted. Designs with a reflector and with a transmitter and receiver are available.

## Light curtain

Because a light curtain has a larger detection range, it offers greater safety than a photocell. This form of detection is highly suited to a large variety of vehicle and load sizes.
